

Solution Architect for developmental projects within Industrial Automation

Are you passionate about industrial automation and enjoy working with OT solutions at a strategic level? Do you have a broad technological understanding and the ability to translate complex needs into future-proof OT solutions? Then you might be the Solution Architect we are looking for!

As a Solution Architect at Eltronic A/S, you will be a key player in developing and designing the best-integrated automation solutions for our customers. You will work closely with both internal and external stakeholders to ensure that our solutions remain innovative, scalable, and in line with the latest trends in industrial automation, IIOT, and cybersecurity.

In Eltronic A/S it's not just technology that's in focus – it's also the people behind it. You become part of an environment where ideas are heard, we achieve together, and we have great trust in each other. We have a strong culture where teamwork, innovation, and high expertise form the foundation of our success. At Eltronic, we not only create solutions for our customers but also work continuously to strengthen and develop our internal tools and capabilities.

Your primary tasks and responsibilities will include:

- Developing and designing strategic OT and automation architectures
- Ensuring integration between PLC, SCADA, Batch, MES, and IT/IIOT infrastructure
- Driving the implementation of OT solutions in collaboration with interdisciplinary teams
- Keeping abreast of technological trends and bringing new knowledge into the organization
- Acting as a trusted advisor and sparring partner for projects and management.

The position reports to the Business Manager Automation & Manufacturing IT, and you will be associated with our office in Ballerup, with ample opportunity to work from our office in Hillerød.

Professional Qualifications

- Broad understanding and experience with technologies such as PLC, SCADA, MES, OT infrastructure, virtualization, batch/continuous processing, and cybersecurity
- Technical background as an engineer or similar – preferably with experience from the process and/or Life Science industry
- A strategic mindset rather than deep technical specialization
- Good communication skills in written and spoken Danish and English

Personal Qualifications

Personally, you are trustworthy with good collaboration skills and see teamwork and helpfulness as a given. You have an innovative mindset and a high sense of responsibility, which, together with your quality consciousness, is reflected in the results. At the same time, like us, you take pride in contributing to the informal organization where both activity levels and moods are high.

Eltronic Offers

You will become part of a reputable company where solutions are known for their quality and innovation. We have an informal and flat organization with a strong and appreciated team spirit, where EQ is in focus, and we value collaboration, well-being, and development. There is little gap between thought and action, and you can easily make a difference, as results mean more than titles.

We offer attractive employee conditions with a high degree of flexibility, salary according to qualifications, professional and personal development, and a team that looks forward to welcoming you.

Denmark's Leading Automation Company

[Eltronic A/S](#) is an engineering company with more than 25 years of experience in developing production systems and automation. Eltronic A/S employs more than 300 engineers and technicians within a wide range of disciplines and with many different competencies.

Eltronic A/S is part of [Eltronic Group](#) – an engineering group that provides intelligent special solutions in close contact with our customers and helps increase their competitiveness and create a sustainable business.

Interested in joining our team?

If you are ready for an exciting and challenging role within Life Science and process automation, we are more than eager to hear from you. Interviews are held continuously, and we prioritize finding the right match.
